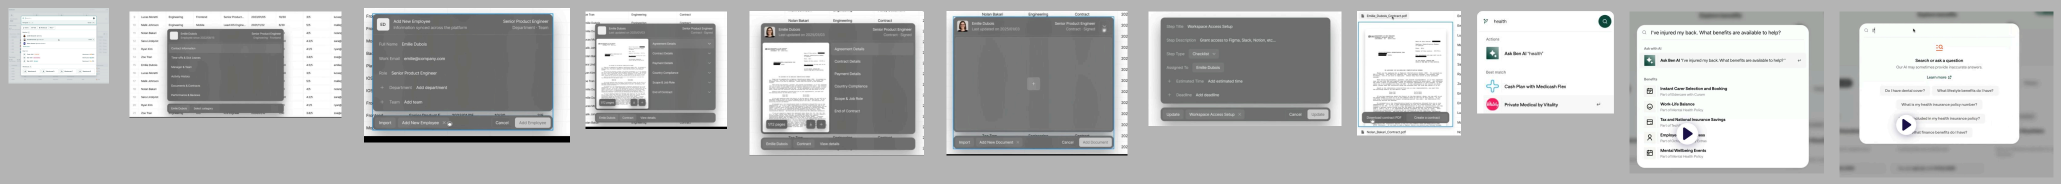
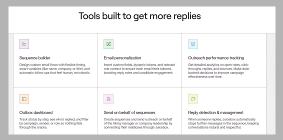
Pulse Assist



Feature



Tools built to get more replies

Sequence builder
Design custom email flows with flexible timing, smart variables (like name, company, or title), and automatic follow-ups that feel human, not robotic.

Email personalization
Insert custom fields, dynamic tokens, and relevant role context to ensure each email feels tailored, boosting reply rates and candidate engagement.

Outreach performance tracking
Get detailed analytics on open rates, click-throughs, replies, and bounces. Make data-backed decisions to improve campaign effectiveness over time.

Outbox dashboard
Track status by step, see who's replied, and filter by campaign, sender, or role so nothing falls through the cracks.

Send on behalf of sequences
Create sequences and send outreach on behalf of the hiring manager or company leadership by connecting their mailboxes through Juicebox.

Reply detection & management
When someone replies, Juicebox automatically stops further messages in the sequence, keeping conversations natural and respectful.
